

Nureva™ HDL300 audio conferencing system

For small to mid-sized spaces

There's no question that the nature of work is changing. Many meetings have remote participants who need to be fully contributing as if they were in the room. Meetings are morphing from passive events where information is consumed to active collaboration sessions where teams create.

People no longer want to be constrained to sitting at a meeting room table, facing a conference phone – they need the freedom to work at immersive wall systems and large displays. Passionate conversations with teammates talking at once need to be shared with remote colleagues with all the richness preserved.

The HDL300 system is designed precisely for this cultural shift. Our game-changing technology takes conferencing beyond simply sharing voices – it reduces listener fatigue as it boosts team collaboration.

Audio conferencing technology with a difference

At the heart of the HDL300 system is Microphone Mist™ technology, which fills the room with 8,192 virtual microphones. Executed on a real-time hardware platform, this patent-pending technology processes all microphones simultaneously and dynamically focuses on the one closest to the speaker, ensuring the best quality sound for remote listeners.

Unlike other systems, there is no clipping as a new person begins to speak. Our system is uniquely equipped to capture dynamic discussions, ensuring remote participants never miss a word.

Fully plug and play, the HDL300 system autocalibrates so there's no technical setup or adjustment for the room. The integrated microphone and speaker bar easily mounts on the wall, virtually eliminating table clutter and distracting table noises while still picking up and delivering clear sound to all participants.

Engineered for collaboration

Designed for small to mid-sized spaces, the system supports a broad range of conferencing applications. Its full-duplex, acoustic echo cancellation and noise cancellation technology delivers the baseline quality that users expect.

The HDL300 system has been engineered from scratch to create an outstanding experience for people who need to connect and collaborate with colleagues at a distance. Simply put, the HDL300 system is the most advanced audio conferencing solution ever created at a very affordable price point.
